RIO GRANDE
VERTICAL | FACADES

RIO GRANDE Vertical uses a vertical tile direction to create a modern, visually heightening effect, giving the facade movement and an elegant rhythm.

RIO GRANDE

LONG | FACADES

RIO GRANDE Long uses elongated, horizontally arranged tiles to emphasize facade lines and create a calm, consistent and modern impression.

STOUNLINE is a piece of nature for your home. Long-format natural stone tiles are a modern facade cladding solution that combines aesthetics, functionality and longevity. Installed by bonding, similarly to clinker tiles, they are an excellent alternative to traditional masonry or clinker. Their narrow, elongated format creates an elegant contemporary facade design, visually extends the lines and gives the building a distinctive character.

Wood-plastic composite (WPC) cladding is a modern and long-lasting solution for facades, fences and terraces. Double-layer technology provides maximum resistance to moisture, UV rays and temperature changes, while the surface remains stable and keeps its color for many years. The look of natural wood is combined with minimal maintenance, helping the facade retain an impeccable appearance for years without extra effort. It is an excellent choice for anyone looking for strength, aesthetics and practicality in one solution.

Slate is a natural stone roofing and facade cladding material that has been used in Europe for centuries for its exceptional resistance and longevity. Rectangular and rhombus-shaped tiles allow different installation patterns. Thanks to low water absorption, resistance to UV rays and temperature changes, slate retains its technical and aesthetic qualities for decades, even in demanding climate conditions. RHOMB and PARALLEL slate cladding bring distinctive elegance and restrained decoration to home architecture!
